Learning Objectives/Internship Objectives

Explore career alternatives prior to graduation – Nowadays it has become so much important to be updated as competition is increasing day by day in IT industry and also challenges are also there, so It is necessary to know what is happening in IT industry, What kind of work culture is there, What are latest software languages and technologies, which technology to choose and which one not to choose like these many questions are there. One must know these things during his/her graduation only if he/she wants to make career in IT industry. During this internship I have got answer to all such questions and I have got clear Idea about how to prepare for Future IT Career.

Integrate theory and practice – As we learn many things in college syllabus theoretically but still there remains a gap between theory and applying it in practical work. Here during internship I got to learn many new technologies that too practically. I have learned how to apply configure server for real-time project (software) development, How to deal with errors, How to design attractive webpages, how to think like a software developer. How to use Advance Java technology in real-time software development? Everything which we generally learn in theory here I got to use it practically every day during internship period.

Develop work habits and attitudes necessary for job success – As daily I was attending training sessions as well as our mentor was giving us tasks to complete so I had to be attentive every day. I had to work every day so as to complete the given task. so in this way now I have got habit of working with learning.

Develop communication, interpersonal and other critical skills in the job interview process – As the project task was given to us GroupWise so we the group members had to communicate with each other so as to complete the task. We had to decide and divide our work properly in such a way that it should get done in given deadline. Again our mentor had taken some soft-skills sessions so I have got to learn like how to work on improving communication, interpersonal skills for future job interviews.

CONTENT

We conduct Technical Training Programs for faculties and students of Engineering and Polytechnic Colleges. Help to upgrade their technical skills required for research and industrial purposes. Our team develop Software Products as per customer's requirement.
