

QUESTION BANK ON EMERGING TRENDS IN COMPUTER ENGINEERING

1. Define the term artificial intelligence.
2. Classify AI on basis of capabilities.
3. Classify AI on basis of functionality.
4. Enlist different features of artificial intelligence.
5. Elaborate narrow AI (weak AI).
6. Elaborate general AI (strong AI).
7. Elaborate super AI.
8. Elaborate narrow reactive machines.
9. Elaborate narrow limited memory AI.
10. Elaborate NLP (natural language processing).
11. Elaborate computer vision feature of AI.
12. Elaborate predictive analysis feature of AI.
13. Elaborate speech recognition feature of AI.
14. Elaborate personalization feature of AI.
15. Elaborate predictive analysis feature of AI.
16. Explain the importance of decision making feature of AI.
17. Explain the importance of automation and robotics feature of AI.
18. State the evolution of AI year wise.
19. Enlist applications of artificial intelligence.
20. Differentiate between machine learning and deep learning.
21. Enlist any 2 supervised machine learning algorithms.
22. Enlist any 2 unsupervised machine learning algorithms.
23. Illustrate the concept of reinforcement machine learning.
24. Enlist the types of neural networks.
25. Enlist different components of AI.
26. Illustrate the working of AI with neat diagram.
27. Define embedded systems.
28. State the applications of embedded systems.
29. Enlist Key Characteristics of Embedded Systems.
30. Enlist Different architectural components of Embedded Systems.
31. Write a short note on PIC (Peripheral Interface Controller).
32. Enlist the features of ARM (Advanced RISC Machine).
33. Write a short note on AVR (Alf-Egil Bogen and Vegard Wollan RISC) Microcontroller.
34. Write a short note on ASIC (Application-Specific Integrated Circuit).
